

FAQ of Health Education

Q: Which kinds of first-aid training does the Health Center provide?

A: There are 3 kinds of first aid trainings in total, including: **Basic Trauma Life Support (BTLS)**, a basic aid for accidental trauma patients, which includes bleeding control, fixation, bandaging and carrying techniques; the **Cardiopulmonary Resuscitation (CPR)** course that emphasizes on the CPR techniques, which can be applied to patient whose heart has stopped beating or who has stopped breathing, the Heimlich Maneuver, which can be applied to patient who has something stuck in the trachea, and instructions of using Automated External Defibrillator (AED); and **Basic Life Support (BLS)**, on the other hands, is a comprehensive training course that combines above first-aid techniques.

Q: How do I register the first-aid training courses?

A: These courses mainly target the NTU students, academic staffs and their families. Registration methods: Please enter the NTU Activity Registration System for registration before the activity starts. (Website: <https://info2.ntu.edu.tw/register/flex/main.html>)

For people who have difficulty to register online, please contact us by telephone to reserve your space. Activity Information: Please visit the NTU Health Center Website (Website: <http://shmc.osa.ntu.edu.tw/main.php>)

Q: What are the conditions for receiving the first-aid training certificate?

A: According to the Department of Health, BTLS requires at least 8 learning hours and 4 hours for CPR; the proportion of the instructor and students has to be maintained at 1:9 (at least) and students must pass both written and practical examinations. For people who have completed above conditions will then be issued with a certificate certified by the “Society of Resuscitation Medicine, Taiwan”.
